Struers’ range of equipment and consumables for the preparation of mineralogical, geological and ceramic specimens covers the entire preparation process — from initial cutting to the finished thin section or polished section, ready for microscopic examination.

**Struers’ approach to mineralogy is based on four key points:**
- A thoroughly tested method for the production of thin sections without the need of special skills
- Equipment that is easy to handle
- Cost-efficiency
- Environmental protection

**The preparation of mineralogical, geological and ceramic specimens may be divided into two main groups:**
- Preparation of thin sections or polished thin sections for microscopic examination in transmitted or reflected light
- Preparation of specimens for microscopic examination in reflected light

**Thin Sections**
The production of thin sections requires highly specialized equipment. Struers has developed the TS-Method™, a technique which provides outstanding quality and very high reproducibility - and it is very easy to use. The cornerstone of the TS-Method™ is Discoplan-TS, a combined cutting and grinding machine.

**Polished Sections**
The preparation of mineralogical specimens for microscopic examination in reflected light is basically similar to the preparation of other materials. After cutting, the specimens are normally mounted in the vacuum impregnation unit CitoVac using EpoFix resin. Lapping is carried out on LaboPol-30/LaboForce-Mi by means of a cast iron lapping disc and the composite disc MD-Largo. The abrasives used are SiC powder and diamonds. Grinding, lapping and polishing can also take place on either semi-automatic or automatic preparation equipment.

**Discoplan-TS – combined cutting and grinding**
Discoplan-TS is a versatile machine for production of mineralogical thin sections. Discoplan-TS combines the cutting and grinding processes in one machine, thus reducing investments and allowing for very fast preparation procedures.

The left-hand side of Discoplan-TS takes care of the cutting. A choice of two types of diamond cut-off wheels ensures perfect cutting of all materials, with a minimum of deformations.

The cutting module of Discoplan-TS also carries out re-sectioning of the specimen (cutting off surplus material): the thin section is easily fixed in a vacuum holder controlled by a guide rail on the table of the machine.

The right-hand side of Discoplan-TS is designed for precision grinding. For automatic preparation of thin sections all glass slides must have exactly the same thickness with a tolerance of a few µm. A built-in micrometer ensures extreme precision.
**TECHNICAL DATA**

**Discoplan-TS**

1- or 3-phase

Rotational speed: 1400 rpm at 50 Hz, 1700 rpm at 60 Hz

Diamond cut-off wheel: 203 mm dia., 0.5-1.5 mm thickness

Diamond cup wheel: max 180 mm dia.

Precision scale including vernier: 1 µm

Vacuum chucks: 3 pieces, 30 x 50 mm

Dimensions: W x D x H: 700 x 370 x 320 mm

**LaboForce-Mi**

Semi-automatic specimen mover for the preparation of mineralogical specimens. For use with LaboPol-30. Specimen mover plates and dosing unit (LaboDoser-10, 06376901) are ordered separately. 06386130

**Cast Iron disc for mineralogy, 300 mm dia.**

Concentrically grooved, cone-type disc for lapping mineralogical specimens on LaboPol-30/60 (06336127/06346127).

Made of special SiC-resistant cast iron alloy. 06206917

**Specimen Mover Plates for LaboForce-Mi**

For 8 specimens, 25 mm dia. 05236901

For 8 specimens, 30 mm dia. 05236902

For 4 specimens, 40 mm dia. 05236903

For 4 specimens, 60 mm dia. 05236904

For 8 specimens 20 x 30 mm. 05236905

**Thin Section Holder BORTY**

For lapping of thin sections. With Boron Carbide Sticks. 60 mm dia. Including 4 foils of 25 µm and 3 foils of 8 µm. 02686xxx

**Set of Copper Foils**

Extra set of 4 pcs. 25 µm and 6 pcs. 8 µm. 02686901

**Thin Section Holder TYNDS**

For polishing and lapping of thin sections, size 60 mm dia. 02686xxx

**CitoVac**

CitoVac with built-in vacuum ejector vacuum impregnation unit.

Compressed air supply 4.5 - 6 bar required.

1 x 100–240 V / 50-60 Hz. 05926119

CitoVac for external pump

Vacuum impregnation unit. External vacuum pump required.

1 x 100–240 V / 50-60 Hz. 05926219

**Lid for gluing**

Complete with pressing rod and support ring for gluing specimens on glass slides for making thin sections. 05926904

**Standard Slides**

Standard Slides for thin sections, with ground edges. 100 pcs.

28 x 48 mm

27 x 46 mm

80100001

**Microcover Glass**

To be used for covering thin sections.

24 x 32 mm. Abt. 100 pcs.

07010200

**Eukitt**

Synthetic thermoplastic resin for mounting of cover glasses on thin sections. 500 ml.

41000004

**SiC Powder**

For lapping of mineralogical specimens.

To be used on cast iron lapping disc. Grit: 120, 220, 250, 400, 600, 900, 1000, 1200.

407010xx

**MD-Disc**

Disc for magnetic fixation, 300 mm dia.

02426918

**MD-Piano**

Diamond grinding disc for grinding of materials HV 150 - 2000

MD-Piano 80, 300 mm dia.

40800123

MD-Piano 120, 300 mm dia.

40800127

MD-Piano 220, 300 mm dia.

40800131

MD-Piano 500, 300 mm dia.

40800135

MD-Piano 1200, 300 mm dia.

40800139

**MD-Largo**

Maintenance-free disc for one-step fine grinding, using diamonds 300 mm dia.

40500099

**Struers’ products are subject to constant product development. Therefore, we reserve the right to introduce changes in our products without notice.**
To achieve the final thickness (e.g. 20 µm), the sections are now lapped and polished on LaboPol-30/LaboForce-Mi: the specimens are placed either in a BORTY thin section holder for lapping or in a TYNDS thin section holder for polishing. Due to the automated preparation process the specimens are prepared with very high reproducibility.

**Thin section holders**

Thin section holders are indispensable tools in rational precision lapping and polishing of thin sections. Struers’ thin section holders ensure plane specimens of perfect surface quality and well defined and uniform thickness.

**Thin section holders for polishing**

As diamond is used for polishing the thin sections, BORTY can not be used as diamond also removes material from the boron carbide sticks. Therefore a holder which does not touch the polishing cloth must be used. The TYNDS thin section holders are designed to solve this problem. They have the same outer dimensions as the BORTY holders. Consequently, they can be used on the same equipment with the same specimen mover disc that has already been used for precision lapping. The holders ensure excellent polishing.

**Precision lapping holders**

The BORTY thin section holders are provided with very hard sticks of boron carbide (B₂C) which stop any further material removal when they make contact with the lapping disc.

---

**Grinding with cup-wheel on Accutom-100.**

**Thin section holders for lapping and polishing**

LaboForce-Mi is a semi-automatic specimen mover for the production of thin sections, polished thin sections and polished specimens of mineralogical materials. The force is applied through springs which can be individually adjusted.
Preparation discs and lapping powders

Cast iron lapping disc
A cast iron disc (300 mm) for lapping is available. The disc is made of a special cast iron alloy which will resist long-term influence from SiC grains, regardless of grain size.

Lapping powders
Lapping on cast iron discs is carried out with SiC powder. A wide range of grain sizes is available.

MD-Piano
For fast removal of material, grinding can be carried out using MD-Piano, a diamond grinding disc.

MD-Largo
MD-Largo is a composite disc for fine grinding. The special formulation of the composite material together with the use of diamonds as abrasive guarantees a uniform removal of material from different phases without smearing, deformation or chipping. The specimens will maintain a perfect planeness.

CitoVac
CitoVac is a vacuum impregnation unit, especially designed for mounting and impregnating of porous materials. It is also very well suited for gluing specimens to glass slides for the production of thin sections.

A special lid has to be used when gluing specimens to glass slides with the CitoVac.

Easy filling of mounting cups.
Ensuring Certainty

With offices and affiliates in 24 countries and a presence in more than 50 countries worldwide, Struers is the world’s leading materialographic solution supplier. We are dedicated to enabling our customers to ensure certainty in all aspects of materialographic preparation and testing as well as material hardness testing – wherever they are in the world. Struers offers a complete range of equipment, consumables, service and training programmes – all supported by the most comprehensive knowledge base, global applications support and a certified global service set-up.
